## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 18 April 2006 has been entered.

### ***Claims***

Claims 1, 4, 24, and 28 are amended. Claims 5-7, 25-26, and 29-32 are canceled. Please note claims 7 and 30 are dependent upon canceled claim 6, claim 31 is dependent upon canceled claim 26, and claim 32 is dependent upon canceled claim 29.

### ***Election/Restrictions***

Claims 33 and 34 are rejoined due to their dependence upon allowable claims.

### ***Allowable Subject Matter***

Claims 1-4, 8, 24, 27-28, and 33-34 are allowed.

The following is an examiner's statement of reasons for allowance:

As to claims 1, 24, and 28, relevant prior art of record did not disclose, alone or in combination, the liquid crystal display module for a notebook computer as claimed comprising: a bottom cover; a light guide panel; a reflector adjacent to the bottom cover and the light guide panel, the reflector including a first hole; and a main support being adjacent to bottom cover and having a protrusion extending a predetermined distance from a surface of the main support and engaged with the first hole; wherein the bottom cover includes a second hole for receiving the protrusion.

The closest combination is Applicant's Admitted Prior Art (APA) in view of Furihata USPAT 6,309,081 B1.

APA discloses in Figures 1-3 a conventional liquid crystal display module for a notebook computer (specification page 7, [0033]), comprising:

a liquid crystal display panel, 20, in which a liquid crystal is injected between two substrates; a light guide panel, 4, for converting incident light from a light source to be directed toward the liquid crystal display panel (Applicant's flat type light), wherein the converted light is directed toward said liquid crystal display panel (specification, page 2); a reflector, 8, for preventing light leakage through a rear surface for the light guide panel (Applicant's wrapping the bottom surface of said light guide panel); a main support, 6, containing said liquid crystal display panel and said light guide panel.

Furihata teaches a backlight unit in Figure 1 comprising a clamping member, 300, disposed in said reflector, [60 and 300 comprise a two-piece reflector, col. 4, lines

20-32], and adjacent said main support for fixing them (col. 4, lines 62-67), and 2) a portion of an upper surface of said reflector, 60 and 300, is adjacent to a bottom surface of said light guide panel, 20, and wherein a portion of said upper surface of said reflector, 300, is non-adjacent to said bottom surface of said light guide panel, to provide proper assembly without an adhesive (col. 4, lines 59-61).

However, no prior art with proper motivation to combine was found to teach the claimed reflector including a first hole; and a main support being adjacent to bottom cover and having a protrusion extending a predetermined distance from a surface of the

main support and engaged with the first hole; wherein the bottom cover includes a second hole for receiving the protrusion.

Claims 2-4, 8, 27, and 33-34 properly depend from claims with allowable subject matter above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
